

Datasets anticipated by the Producer

Data field	Notes
GENERAL <ul style="list-style-type: none"> Name of product Type of product Country of production Your processing/storage country Pick-up Country Ship-to Country 	<p>Country of production - Where the last substantial transformation of the final product took place. Bottling, Labeling, Packaging is not considered as such.</p> <p>Processing and storage Country - Where your organization processes, handles, or interact with the product in any way. Leave blank if not applicable.</p> <p>Pick-up Country - Where you collect the goods before transporting them to your own site. If there is no pick-up (e.g. you produce it yourself), select your production country.</p> <p>Ship-to Country - Where you deliver the goods for the buyer to receive or collect them.</p>
INGREDIENTS <ul style="list-style-type: none"> List of ingredients 	<p>Include all substances used during any stage of manufacturing—even if they aren't required on the final label. This includes core ingredients, additives, and any processing aids.</p>
PACKAGING <ul style="list-style-type: none"> Name Type Weight- Net Content Country of purchase 	<p>By default, the PCF from packaging is calculated based on the country of production. If you have primary data available, this will replace the default estimations. You can add as many materials/components as needed.</p>
TRANSPORT <ul style="list-style-type: none"> From To Mode of transport Fuel type Distance Refrigerated – Yes/No 	<p>By default, the PCF from transport is calculated based on the country of production and ship-to. If you have primary data available, this will replace the default estimations. If you have multiple ship-to-country, provide primary data for each individually.</p>
ENERGY <ul style="list-style-type: none"> Energy type 	<p>Add specific information about the energy used in the production or any kind of handling of this product that your organization is responsible for. Added energy data is based on your selected processing/storage country.</p>

<ul style="list-style-type: none">• Amount [kWh/kg of output]	
VOLUMES <ul style="list-style-type: none">• Ship-to Country• Sales volumes: tonne/year• Year	Enter sales volumes per year to calculate a weighted average PCF based on country sales from the last year entered.

Table 1: Overview of all datasets expected from a Producer. Datasets are organized by the tabs in the CarbonCloud platform.
