VP of Science

Purpose of today's session

To help you familiarise with the platform, so you and your suppliers can efficiently *contribute activity data in the platform*

Supply chain data collection

- Receive your product carbon footprints(PCFs)
- Control sensitive activity data
- Identify emission hotspots in your supply chain

Platform walkthrough

Key steps

STEP 1

Create Your Account

Check your email for an invitation and set up your account

STEP 2

Accept Invitations

Review and accept product information from your customers

STEP 3

Enter Your Data

Input activity data for your products

STEP 4

Invite Your Suppliers

Connect with your suppliers to gather their activity data

Hi Test Person,

Systembolaget invites you to join our Product carbon footprint project on the CarbonCloud platform. As our supplier, your data will help us calculate more accurate carbon footprints across our supply chain.

By sharing your product information, you will:

- Get clear insights into your products' carbon footprints
- Find opportunities to reduce emissions
- Meet growing market demands for climate transparency
- Prepare for upcoming regulatory requirements

Here is what to do:

1. Create your CarbonCloud account (or log in if you already have one)
2. Review the product data in the platform and update it with your actual product information
3. Invite your own suppliers to provide their data

To the platform

Thank you for participating in this important work.

Best Regards,

Test Person, Systembolaget
